List of Science Words Starting with E

There are numerous science words that start with the letter "e." Here's a categorized list of some of the most significant ones:

1. Biology

- **Ecosystem:** A biological community of interacting organisms and their physical environment. Ecosystems can be as large as a desert or as small as a puddle.
- **Endemic:** Refers to a species that is native to a particular area and found nowhere else in the world. For example, the Galápagos tortoise is endemic to the Galápagos Islands.
- **Enzyme:** A protein that acts as a catalyst in biochemical reactions, speeding up the process without being consumed in the reaction.
- **Eukaryote:** Organisms whose cells contain a nucleus and other organelles enclosed within membranes, including animals, plants, fungi, and protists.

2. Chemistry

- **Electrolyte:** A substance that produces an electrically conducting solution when dissolved in a polar solvent, such as water. Common electrolytes include salts, acids, and bases.
- **Emission:** The process by which a substance is released into the environment, often referring to gases or pollutants released from chemical reactions or combustion.
- **Ester:** A compound formed from an alcohol and an acid, where the hydroxyl (-OH) group of the acid is replaced by an alkoxy (-O-alkyl) group. Esters are often responsible for the fragrances of fruits.
- **Exothermic Reaction:** A chemical reaction that releases energy in the form of heat. Combustion is a common example of an exothermic reaction.

3. Physics

- **Einstein's Theory of Relativity:** A fundamental theory in physics that describes the relationship between space, time, and gravity. It consists of the special theory of relativity and the general theory of relativity.
- **Energy:** The quantitative property that must be transferred to an object in order to perform work on, or to heat, the object. It exists in various forms, including kinetic, potential, thermal, and chemical energy.
- **Electromagnetism:** The branch of physics that deals with the interaction between electric charges and currents, and the magnetic fields they produce.
- **Entropy:** A measure of the amount of disorder or randomness in a system, often associated with the second law of thermodynamics.

4. Environmental Science

- **Ecology:** The branch of biology that studies the interactions among organisms and their environment, focusing on ecosystems, biodiversity, and conservation.
- **Eutrophication:** A process in which water bodies become overly enriched with nutrients, leading to excessive growth of algae and depletion of oxygen, negatively affecting aquatic life.
- **Endangered Species:** A species that is at risk of extinction due to a variety of factors, including habitat loss, climate change, and overexploitation.
- **Environmental Impact Assessment (EIA):** A process of evaluating the potential environmental impacts of a proposed project or development before it is carried out.
