 - N-type and P-type semiconductors are created depending on the type of dopant used.
3. Charge Carriers:
 - Electrons and holes are the primary charge carriers in semiconductors.
 - Understanding their movement and behavior is crucial for device operation.
4. P-N Junctions:
 - Fundamental to many semiconductor devices, such as diodes and transistors.
 - The junction forms a depletion region that influences current flow.
5. Carrier Statistics:
 - Fermi-Dirac statistics apply to semiconductors, defining the distribution of charge carriers at thermal equilibrium.
