Overview of the ServiceNow Tokyo Delta Exam

The ServiceNow Tokyo Delta Exam is an update certification designed for individuals who have already attained a baseline ServiceNow certification and wish to validate their knowledge on the latest features introduced in the Tokyo release. This exam is part of ServiceNow's continuous learning path, ensuring certified professionals remain current with platform innovations. The Tokyo Delta exam tests understanding of new functionalities, changes to existing modules, and improvements in user experience and administration tools.

By taking this delta exam, candidates demonstrate their commitment to staying informed about the evolving ServiceNow ecosystem, which is critical for delivering optimized IT service workflows and solutions. The exam is ideal for developers, system administrators, and consultants who work extensively with the ServiceNow platform.

Exam Structure and Format

The ServiceNow Tokyo Delta Exam is typically a timed, multiple-choice test that assesses candidates' knowledge of the updates introduced in the Tokyo release. The exam format is designed to evaluate both theoretical understanding and practical application skills. Candidates should expect questions that cover new platform capabilities, configuration changes, and best practices.

Number of Questions and Duration

The exam generally consists of approximately 40 to 50 questions, and candidates are given 60 to 90 minutes to complete it. The exact numbers may vary depending on ServiceNow's current certification policies. Each question is crafted to test specific knowledge areas related to the Tokyo release delta.

Passing Score and Retake Policy

To pass the exam, candidates must achieve a minimum passing score, which is usually around 70%. If a candidate does not pass on the first attempt, ServiceNow allows retakes after a specified waiting period, typically 14 days. It is recommended to thoroughly prepare before retaking the exam to ensure success.

Key Topics Covered in the Exam

The ServiceNow Tokyo Delta Exam focuses on the enhancements and new features that differentiate the Tokyo release from previous versions. Understanding these topics is essential for passing the exam and applying the knowledge effectively in real-world scenarios.

Platform Enhancements

Key platform improvements such as enhanced user interface components, new workflow automation tools, and upgraded integration capabilities are tested. Candidates need to be familiar with how these enhancements improve efficiency and user experience.

IT Service Management Updates

The exam covers updates to ITSM modules including incident management, problem management, change management, and service catalog enhancements. Candidates should understand the new functions and how they impact IT operations.

Security and Compliance Features

New security controls, compliance frameworks, and data protection measures introduced in the Tokyo release form an important part of the exam. Knowledge of role-based access control enhancements and audit capabilities is necessary.

Development and Implementation Tools

The delta exam also tests knowledge of updated development tools such as Flow Designer improvements, updated scripting APIs, and integration hubs. Understanding these tools is crucial for developers and implementation specialists.

- UI/UX improvements and new interface widgets
- Enhanced automation with Flow Designer
- Security updates and compliance enhancements
- Improved integration options
- Updates to ITSM and ITOM modules

Preparation Strategies for the ServiceNow Tokyo Delta Exam

Effective preparation is key to passing the ServiceNow Tokyo Delta Exam. A structured study plan, practical experience, and utilization of official learning resources can greatly improve the chances of success.

Review Official ServiceNow Documentation

ServiceNow provides detailed release notes, product documentation, and training materials specific to the Tokyo release. These resources should be studied thoroughly to understand the scope of changes and new features.

Hands-on Practice

Practical experience using the Tokyo release on a personal or sandbox instance helps candidates familiarize themselves with new functionalities. Hands-on practice is essential to reinforce theoretical knowledge and understand implementation nuances.

Training Courses and Workshops

Enrolling in official ServiceNow training courses or participating in workshops focused on the Tokyo release delta can provide structured learning and expert guidance. These courses often include practice exams and scenario-based learning.

Use Practice Exams and Study Groups

Taking practice exams simulates the test environment and helps identify knowledge gaps. Joining study groups or online forums allows for knowledge sharing and discussion of challenging topics related to the exam.

1. Study official Tokyo release notes and documentation thoroughly.
2. Gain hands-on experience with the Tokyo platform features.
3. Attend official training and certification courses.
4. Practice with sample exams and quizzes.
