Unlike physical illness, this condition pertains primarily to feelings of sorrow, grief, or distress that affect a person's emotional core. It can be triggered by various life events, such as loss,

disappointment, or heartbreak, and is characterized by a sense of heaviness or emotional pain that weighs down the individual.

Historical and Literary Context

Historically, the heart has been symbolically associated with emotions and the soul. Literature and poetry frequently use "sick at heart" to evoke imagery of profound sadness or moral anguish.
