### Choosing Your Map

When starting a new game, you'll first need to select a map. Each map has its resources, terrain, and challenges, which can significantly affect your city-building experience. Here are some tips for selecting the right map:

- **Consider Resources:** Look for maps with abundant resources like water, minerals, and oil. These can boost your economy and provide essential services.
- **Evaluate Terrain:** Flat terrain is easier to build on, while mountainous or uneven terrain might require more planning and creativity.
- **Assess Climate:** Different climates can impact your city's development, including natural disasters and environmental challenges.

## City Planning Essentials

Effective city planning is the cornerstone of a successful SimCity 2000 experience. A well-laid-out city can minimize traffic congestion, optimize resource use, and enhance the quality of life for your citizens.

## Zone Types

In SimCity 2000, you can create three primary zones: residential, commercial, and industrial. Each zone has its purpose, and balancing them is vital for your city's growth.

- **Residential Zones:** These areas house your citizens. They require access to services like schools, parks, and police stations to flourish.
- **Commercial Zones:** These areas provide jobs and services to your residents. Ensure they are located near residential zones to boost accessibility.
- **Industrial Zones:** Factories and manufacturing units fall under this category. They are vital for your economy but can lead to pollution, so keep them away from residential zones.

## Transportation Networks

A well-planned transportation network is essential for the growth and efficiency of your city. Consider the following elements when building your transportation system:

1. **Roads:** Use a grid layout for easy navigation and access. Consider one-way streets for high-traffic areas.
2. **Public Transport:** Implement buses, subways, and railways to reduce traffic congestion and improve citizen mobility.
3. **Airports and Ports:** For larger cities, consider adding airports and seaports for international trade and travel.

## Managing City Services

City services such as education, healthcare, and safety are crucial for maintaining citizen satisfaction and ensuring a thriving metropolis.

A healthy population is a productive population. Ensure your city has adequate healthcare facilities to keep citizens happy and healthy.
