- SINGLE USE BIOREACTORS AND MIXING BAGS
- DISPOSABLE TUBING AND CONNECTORS
- PRE-STERILIZED FILTERS AND SENSORS
- SINGLE USE CHROMATOGRAPHY COLUMNS

THESE COMPONENTS ARE ASSEMBLED INTO INTEGRATED SYSTEMS THAT SUPPORT VARIOUS STAGES OF BIOPHARMACEUTICAL

MANUFACTURING, FROM CELL CULTURE TO PURIFICATION AND FORMULATION.

HISTORICAL DEVELOPMENT

SINGLE USE TECHNOLOGY EMERGED IN THE LATE 1990S AS A RESPONSE TO THE INCREASING COMPLEXITY AND COST OF BIOLOGICS MANUFACTURING. INITIALLY LIMITED TO SIMPLE FLUID TRANSFER APPLICATIONS, IT HAS EVOLVED INTO FULLY INTEGRATED SYSTEMS CAPABLE OF SUPPORTING LARGE-SCALE PRODUCTION. ADVANCES IN MATERIALS SCIENCE AND STERILIZATION METHODS HAVE FACILITATED THE WIDESPREAD ADOPTION OF SINGLE USE TECHNOLOGY IN BIOPHARMACEUTICAL FACILITIES WORLDWIDE.

KEY BENEFITS OF SINGLE USE SYSTEMS

THE INTEGRATION OF SINGLE USE TECHNOLOGY IN BIOPHARMACEUTICAL MANUFACTURE OFFERS NUMEROUS ADVANTAGES THAT HAVE LED TO ITS RAPID INDUSTRY ADOPTION. THESE BENEFITS IMPROVE PROCESS EFFICIENCY, PRODUCT QUALITY, AND REGULATORY COMPLIANCE.

REDUCED CONTAMINATION RISK

SINGLE USE SYSTEMS SIGNIFICANTLY MINIMIZE THE RISK OF CROSS-CONTAMINATION BETWEEN PRODUCTION BATCHES BY ELIMINATING THE NEED FOR CLEANING AND STERILIZATION OF EQUIPMENT. SINCE COMPONENTS ARE DISPOSED OF AFTER EACH USE, THE POTENTIAL FOR MICROBIAL CONTAMINATION IS GREATLY DECREASED, ENHANCING PRODUCT SAFETY AND QUALITY.

INCREASED FLEXIBILITY AND SCALABILITY

SINGLE USE TECHNOLOGY ENABLES RAPID CHANGEOVER BETWEEN PRODUCTS AND QUICK SCALING UP OR DOWN OF PRODUCTION VOLUMES. THIS FLEXIBILITY IS PARTICULARLY IMPORTANT FOR BIOPHARMACEUTICAL MANUFACTURERS DEVELOPING MULTIPLE PRODUCTS OR PERSONALIZED MEDICINES, AS IT REDUCES LEAD TIMES AND CAPITAL EXPENDITURES.

COST AND TIME SAVINGS

BY ELIMINATING CLEANING VALIDATION AND REDUCING FACILITY DOWNTIME, SINGLE USE SYSTEMS CONTRIBUTE TO LOWER OPERATIONAL COSTS AND FASTER MANUFACTURING CYCLES. ADDITIONALLY, THE LOWER INITIAL INVESTMENT COMPARED TO STAINLESS STEEL FACILITIES MAKES SINGLE USE TECHNOLOGY ATTRACTIVE FOR SMALL AND MEDIUM-SIZED ENTERPRISES.

ENVIRONMENTAL CONSIDERATIONS

WHILE SINGLE USE TECHNOLOGY GENERATES DISPOSABLE WASTE, THE OVERALL ENVIRONMENTAL FOOTPRINT CAN BE LOWER DUE TO REDUCED WATER AND ENERGY CONSUMPTION ASSOCIATED WITH CLEANING AND STERILIZATION PROCESSES. MANUFACTURERS INCREASINGLY FOCUS ON SUSTAINABLE DISPOSAL AND RECYCLING METHODS TO MITIGATE ENVIRONMENTAL IMPACT.

APPLICATIONS IN BIOPHARMACEUTICAL MANUFACTURING

SINGLE USE TECHNOLOGY IS UTILIZED ACROSS MULTIPLE STAGES OF BIOPHARMACEUTICAL PRODUCTION, FROM UPSTREAM PROCESSING TO DOWNSTREAM PURIFICATION AND FORMULATION.

UPSTREAM PROCESSING

IN UPSTREAM PROCESSING, SINGLE USE BIOREACTORS AND MIXING BAGS ARE USED FOR CELL CULTURE AND FERMENTATION. THESE DISPOSABLE BIOREACTORS COME IN VARIOUS SIZES, FROM A FEW LITERS TO SEVERAL THOUSAND LITERS, ALLOWING FOR FLEXIBLE SCALE-UP. SINGLE USE SENSORS INTEGRATED INTO THESE SYSTEMS PROVIDE REAL-TIME MONITORING OF CRITICAL PARAMETERS SUCH AS pH, DISSOLVED OXYGEN, AND TEMPERATURE.

DOWNSTREAM PROCESSING

SINGLE USE COMPONENTS ARE EMPLOYED IN FILTRATION, CENTRIFUGATION, AND CHROMATOGRAPHY STEPS DURING DOWNSTREAM PROCESSING. DISPOSABLE DEPTH FILTERS, VIRUS FILTERS, AND CHROMATOGRAPHY COLUMNS REDUCE THE RISK OF CONTAMINATION AND SIMPLIFY CLEANING REQUIREMENTS. THIS FACILITATES FASTER PROCESS DEVELOPMENT AND BATCH TURNAROUND.

FORMULATION AND FILL-FINISH

SINGLE USE TECHNOLOGY IS ALSO APPLIED IN FORMULATION AND ASEPTIC FILL-FINISH OPERATIONS. PRE-STERILIZED BAGS AND TUBING ENSURE PRODUCT INTEGRITY WHILE MINIMIZING CONTAMINATION RISKS. THE MODULAR NATURE OF SINGLE USE SYSTEMS SUPPORTS RAPID CHANGEOVER AND CUSTOMIZATION OF PRODUCTION LINES TO MEET VARYING PRODUCT DEMANDS.

ANALYTICAL AND QUALITY CONTROL

SINGLE USE SAMPLING SYSTEMS AND SENSORS ENABLE ASEPTIC SAMPLING AND IN-LINE MONITORING, IMPROVING THE ACCURACY AND RELIABILITY OF QUALITY CONTROL MEASURES. THESE COMPONENTS HELP MAINTAIN COMPLIANCE WITH REGULATORY GUIDELINES BY MINIMIZING CONTAMINATION AND ENSURING DATA INTEGRITY.

CHALLENGES AND LIMITATIONS OF SINGLE USE TECHNOLOGY

DESPITE ITS ADVANTAGES, SINGLE USE TECHNOLOGY IN BIOPHARMACEUTICAL MANUFACTURE FACES SEVERAL CHALLENGES THAT MUST BE ADDRESSED TO MAXIMIZE ITS EFFECTIVENESS.

MATERIAL COMPATIBILITY AND EXTRACTABLES

POLYMERIC MATERIALS USED IN SINGLE USE SYSTEMS CAN INTERACT WITH PROCESS FLUIDS, POTENTIALLY RELEASING EXTRACTABLES AND LEACHABLES THAT MAY AFFECT PRODUCT QUALITY. CAREFUL MATERIAL SELECTION, QUALIFICATION, AND TESTING ARE REQUIRED TO MITIGATE THESE RISKS AND ENSURE BIOCOMPATIBILITY.

SCALABILITY CONSTRAINTS

WHILE SINGLE USE BIOREACTORS ARE AVAILABLE IN LARGE VOLUMES, THEY MAY NOT YET REPLACE STAINLESS STEEL SYSTEMS FOR VERY LARGE-SCALE COMMERCIAL PRODUCTION. LIMITATIONS IN MECHANICAL STRENGTH AND COMPONENT SIZE POSE CHALLENGES FOR SCALING BEYOND CERTAIN THRESHOLDS.

WASTE MANAGEMENT

DISPOSAL OF SINGLE USE COMPONENTS GENERATES SIGNIFICANT PLASTIC WASTE, RAISING ENVIRONMENTAL CONCERNS. EFFECTIVE WASTE MANAGEMENT STRATEGIES, INCLUDING RECYCLING AND INCINERATION, ARE ESSENTIAL TO ADDRESS SUSTAINABILITY ISSUES.

SUPPLY CHAIN AND VALIDATION

DEPENDENCE ON SINGLE USE COMPONENT SUPPLIERS NECESSITATES ROBUST SUPPLY CHAIN MANAGEMENT. ADDITIONALLY, THOROUGH VALIDATION OF SINGLE USE SYSTEMS IS REQUIRED TO COMPLY WITH REGULATORY STANDARDS AND ENSURE CONSISTENT PERFORMANCE.
