The Impact of Study Habits on Academic Performance

John Doe

Date: October 23, 2023

Course: Introduction to Research Methods

Abstract

This report investigates the relationship between study habits and academic performance among university students. A sample of 200 students was surveyed, focusing on their study frequency and methods. The findings reveal a significant positive correlation between effective study habits and higher academic performance, suggesting that students who employ systematic study techniques tend to achieve better grades.

Introduction

The academic performance of students is influenced by various factors, including study habits. This report aims to explore how different study habits affect students' grades. The primary research question is: "Do effective study habits lead to better academic performance among university students?"

Methodology

A survey was conducted involving 200 university students from various disciplines. Participants were asked about their study frequency, methods, and their most recent grades. Data were analyzed using SPSS, employing Pearson's correlation to assess the relationship between study habits and academic performance.

Results

- Descriptive Statistics:
 - Mean study frequency: 5 days per week
 - Mean GPA: 3.5
- Correlation Analysis:
 - A Pearson correlation coefficient of 0.65 ($p < 0.01$) indicates a strong positive relationship between effective study habits and GPA.
- Graphical Representation:

Discussion

The results suggest that students who study regularly and employ effective study techniques are likely to achieve higher GPAs. These findings align with previous research that emphasizes the importance of study habits in academic success. However, the study is limited by its reliance on self-reported data and a homogeneous sample. Future research should consider a more diverse sample and explore other influencing factors, such as motivation and external support.

Conclusion

In conclusion, the study confirms that effective study habits are positively correlated with academic performance among university students. These findings highlight the need for educational institutions to promote effective study strategies as part of academic support services.
