POSITION AND ORIENTATION OF THE HEART

THE SURFACE ANATOMY OF THE HEART BEGINS WITH UNDERSTANDING ITS ANATOMICAL POSITION WITHIN THE THORACIC CAVITY. THE HEART IS LOCATED IN THE MIDDLE MEDIASTINUM, POSTERIOR TO THE STERNUM AND ANTERIOR TO THE VERTEBRAL COLUMN. IT LIES OBLIQUELY, WITH APPROXIMATELY TWO-THIRDS OF ITS MASS SITUATED TO THE LEFT OF THE MIDLINE. THE HEART'S APEX POINTS DOWNWARD, FORWARD, AND TO THE LEFT, TYPICALLY LOCATED IN THE FIFTH INTERCOSTAL SPACE AT THE MIDCLAVICULAR LINE. THE BASE OF THE HEART, FORMED MAINLY BY THE LEFT ATRIUM AND PART OF THE RIGHT ATRIUM, FACES POSTERIORLY TOWARDS THE VERTEBRAL COLUMN.

THIS ORIENTATION AFFECTS HOW THE HEART IS PROJECTED ONTO THE ANTERIOR CHEST WALL AND INFLUENCES THE SURFACE LANDMARKS USED TO IDENTIFY VARIOUS CARDIAC STRUCTURES. THE HEART IS ENCLOSED WITHIN THE PERICARDIUM, A FIBROUS SAC THAT ANCHORS IT TO SURROUNDING STRUCTURES, INCLUDING THE DIAPHRAGM AND STERNUM. THE PERICARDIAL CAVITY CONTAINS SEROUS FLUID, ENABLING SMOOTH CARDIAC MOVEMENTS DURING THE CARDIAC CYCLE.

ANTERIOR SURFACE OF THE HEART

THE ANTERIOR OR STERNOCOSTAL SURFACE OF THE HEART IS PRIMARILY FORMED BY THE RIGHT ATRIUM AND RIGHT VENTRICLE. THIS SURFACE LIES DIRECTLY BEHIND THE STERNUM AND COSTAL CARTILAGES AND IS THE MOST VISIBLE ASPECT OF THE HEART WHEN VIEWED FROM THE FRONT.

COMPONENTS OF THE ANTERIOR SURFACE

THE ANTERIOR SURFACE INCLUDES THE FOLLOWING KEY COMPONENTS:

- **RIGHT ATRIUM:** OCCUPIES THE SUPERIOR RIGHT PORTION OF THE ANTERIOR SURFACE AND RECEIVES SYSTEMIC VENOUS BLOOD.

- **RIGHT VENTRICLE:** FORMS THE MAJOR PART OF THE ANTERIOR SURFACE, PUMPING BLOOD INTO THE PULMONARY ARTERY.
- **LEFT VENTRICLE:** CONTRIBUTES TO THE LEFT BORDER AND PART OF THE ANTERIOR SURFACE NEAR THE APEX.
- **PULMONARY TRUNK AND ASCENDING AORTA:** ORIGINATE NEAR THE SUPERIOR BORDER AND ARE PALPABLE IN THE UPPER LEFT PARASTERNAL REGION.

SURFACE LANDMARKS

THE ANTERIOR SURFACE'S CARDIAC SILHOUETTE CAN BE DELINEATED BY THE FOLLOWING LANDMARKS:

- THE STERNUM AND COSTAL CARTILAGES OVERLAY THE HEART'S ANTERIOR ASPECT.
- THE RIGHT BORDER CORRESPONDS APPROXIMATELY TO THE RIGHT EDGE OF THE STERNUM FROM THE THIRD TO THE SIXTH COSTAL CARTILAGE.
- THE LEFT BORDER EXTENDS FROM THE SECOND INTERCOSTAL SPACE NEAR THE STERNUM DOWN TO THE APEX AT THE FIFTH INTERCOSTAL SPACE ALONG THE MIDCLAVICULAR LINE.
- THE PULMONARY TRUNK CROSSES THE LEFT SECOND INTERCOSTAL SPACE, A KEY AREA FOR AUSCULTATION OF THE PULMONARY VALVE.

BASE AND DIAPHRAGMATIC SURFACE

THE BASE OF THE HEART IS THE POSTERIOR ASPECT, FORMED MAINLY BY THE LEFT ATRIUM AND A SMALL PORTION OF THE RIGHT ATRIUM. IT FACES THE VERTEBRAL COLUMN AND IS OPPOSITE THE APEX. THE DIAPHRAGMATIC OR INFERIOR SURFACE RESTS ON THE CENTRAL TENDON OF THE DIAPHRAGM AND IS FORMED PRIMARILY BY THE LEFT VENTRICLE WITH CONTRIBUTIONS FROM THE RIGHT VENTRICLE.

BASE OF THE HEART

THE BASE RECEIVES THE FOUR PULMONARY VEINS DRAINING INTO THE LEFT ATRIUM AND THE SUPERIOR AND INFERIOR VENAE CAVAE ENTERING THE RIGHT ATRIUM. IT IS AN IMPORTANT SURFACE IN IMAGING AND SURGERY DUE TO THE PROXIMITY OF THE GREAT VESSELS AND THE ESOPHAGUS.

DIAPHRAGMATIC SURFACE

THIS SURFACE LIES IN CLOSE CONTACT WITH THE DIAPHRAGM AND CAN BE PALPATED INFERIORLY DURING CLINICAL EXAMINATION. IT CONTAINS THE INFERIOR BORDER FORMED MAINLY BY THE RIGHT VENTRICLE AND A SMALL PART OF THE LEFT VENTRICLE. THE DIAPHRAGMATIC SURFACE IS SIGNIFICANT FOR PROCEDURES SUCH AS PERICARDIAL PUNCTURE.

BORDERS OF THE HEART

THE HEART HAS FOUR DISTINCT BORDERS THAT CAN BE IDENTIFIED ON THE CHEST WALL, EACH CORRESPONDING TO SPECIFIC CARDIAC CHAMBERS AND STRUCTURES. THESE BORDERS HELP IN MAPPING THE HEART'S SILHOUETTE AND GUIDING CLINICAL EXAMINATION.

RIGHT BORDER

THE RIGHT BORDER IS FORMED ENTIRELY BY THE RIGHT ATRIUM AND EXTENDS VERTICALLY ALONG THE RIGHT EDGE OF THE STERNUM FROM THE SUPERIOR VENA CAVA TO THE INFERIOR VENA CAVA.

LEFT BORDER

THE LEFT BORDER IS PRIMARILY FORMED BY THE LEFT VENTRICLE WITH A SMALL CONTRIBUTION FROM THE LEFT ATRIUM AT THE SUPERIOR PART. THIS BORDER EXTENDS FROM THE SECOND LEFT COSTAL CARTILAGE DOWN TO THE APEX AT THE FIFTH INTERCOSTAL SPACE ALONG THE MIDCLAVICULAR LINE.

INFERIOR BORDER

THE INFERIOR BORDER IS FORMED MAINLY BY THE RIGHT VENTRICLE AND A SMALL PORTION OF THE LEFT VENTRICLE NEAR THE APEX. IT LIES ADJACENT TO THE DIAPHRAGM AND SPANS FROM THE RIGHT BORDER TO THE APEX.

SUPERIOR BORDER

THE SUPERIOR BORDER CONSISTS OF THE RIGHT AND LEFT ATRIA AND THE GREAT VESSELS, INCLUDING THE PULMONARY TRUNK AND ASCENDING AORTA. IT IS LOCATED AT THE LEVEL OF THE THIRD COSTAL CARTILAGE BEHIND THE STERNUM.

SURFACE MARKINGS OF CARDIAC CHAMBERS

RECOGNITION OF THE SURFACE ANATOMY OF HEART CHAMBERS IS VITAL FOR CLINICAL PROCEDURES AND DIAGNOSTIC EVALUATIONS. EACH CARDIAC CHAMBER PROJECTS ONTO THE ANTERIOR CHEST SURFACE IN CHARACTERISTIC LOCATIONS.

RIGHT ATRIUM

THE RIGHT ATRIUM FORMS THE RIGHT BORDER OF THE HEART AND LIES BEHIND THE RIGHT HALF OF THE STERNUM FROM THE THIRD TO THE SIXTH COSTAL CARTILAGE. IT RECEIVES SYSTEMIC VENOUS BLOOD THROUGH THE SUPERIOR AND INFERIOR VENAE CAVAE.

RIGHT VENTRICLE

THE RIGHT VENTRICLE OCCUPIES MOST OF THE ANTERIOR SURFACE AND INFERIOR BORDER OF THE HEART. IT EXTENDS FROM THE INFERIOR BORDER UP TO THE PULMONARY TRUNK AT THE LEFT SECOND INTERCOSTAL SPACE.

LEFT ATRIUM

THE LEFT ATRIUM IS MOSTLY POSTERIOR AND FORMS PART OF THE BASE OF THE HEART. IT IS NOT APPRECIABLY VISIBLE ON THE ANTERIOR CHEST WALL BUT CAN BE INFERRED POSTERIORLY.

LEFT VENTRICLE

THE LEFT VENTRICLE FORMS THE APEX AND LEFT BORDER OF THE HEART. IT EXTENDS FROM THE APEX LOCATED AT THE FIFTH INTERCOSTAL SPACE ALONG THE MIDCLAVICULAR LINE UPWARD TO THE SECOND LEFT INTERCOSTAL SPACE NEAR THE STERNUM.

CLINICAL SIGNIFICANCE OF SURFACE ANATOMY

THE SURFACE ANATOMY OF HEART PLAYS A CRUCIAL ROLE IN CLINICAL PRACTICE, PARTICULARLY IN CARDIAC EXAMINATION AND PROCEDURES.

AUSCULTATION POINTS

IDENTIFICATION OF SURFACE LANDMARKS ENABLES ACCURATE PLACEMENT OF THE STETHOSCOPE FOR LISTENING TO HEART SOUNDS AND MURMURS CORRESPONDING TO SPECIFIC VALVES:

1. **AORTIC VALVE:** HEARD AT THE RIGHT SECOND INTERCOSTAL SPACE NEAR THE STERNUM.
2. **PULMONARY VALVE:** HEARD AT THE LEFT SECOND INTERCOSTAL SPACE NEAR THE STERNUM.
3. **TRICUSPID VALVE:** HEARD AT THE LEFT LOWER STERNAL BORDER AROUND THE FOURTH TO FIFTH INTERCOSTAL SPACE.
4. **MITRAL VALVE:** HEARD AT THE APEX OF THE HEART, FIFTH INTERCOSTAL SPACE AT THE MIDCLAVICULAR LINE.

PROCEDURAL RELEVANCE

KNOWLEDGE OF THE HEART'S SURFACE ANATOMY GUIDES INVASIVE PROCEDURES SUCH AS CENTRAL VENOUS CATHETERIZATION, PERICARDIOCENTESIS, AND CARDIAC SURGERIES. FOR INSTANCE, PERICARDIOCENTESIS IS OFTEN PERFORMED BY INSERTING A NEEDLE JUST LEFT OF THE XIPHOID PROCESS AND AIMING TOWARD THE LEFT SHOULDER, AVOIDING INJURY TO CARDIAC CHAMBERS AND CORONARY VESSELS.

DIAGNOSTIC IMAGING CORRELATION

SURFACE ANATOMY AIDS IN INTERPRETING CHEST X-RAYS, ECHOCARDIOGRAMS, AND OTHER IMAGING MODALITIES BY CORRELATING EXTERNAL LANDMARKS WITH INTERNAL CARDIAC STRUCTURES. THIS UNDERSTANDING ENHANCES DIAGNOSTIC ACCURACY AND PATIENT CARE.
