Early Button Development

1. Ancient Use: The earliest buttons were made from materials like bone, shell, and metal. They were primarily functional, designed to fasten garments.

3. Renaissance Influence: The Renaissance sparked a revival in the interest of ornate clothing, leading to the creation of more elaborate buttons, including those that would later be classified as treble gilt.

Definition of Treble Gilt Buttons

Treble gilt buttons refer to buttons that are made from a base metal, typically brass, and are coated in gold through a process known as gilding. The term "treble" indicates that these buttons are plated with a thicker layer of gold compared to standard gilt buttons, giving them a more luxurious appearance and enhanced durability.

Manufacturing Process
