What is a Concussion?

A concussion is a type of traumatic brain injury (TBI) that occurs when the brain is jolted or shaken inside the skull. This can result from a direct blow to the head or a sudden acceleration-deceleration movement of the head and neck. Symptoms can include:

Concussion Protocol in the NFL

The NFL has implemented several measures to address concussion management, including:

- Baseline Testing: Players undergo baseline cognitive testing before the season, allowing for comparison after a suspected concussion.
