Key Trigonometric Identities and Formulas

Mastery of trigonometric identities and formulas is essential for success in unit 5. The answer key provides a reference for these critical relationships, enabling quick recall and application in various problems.

Pythagorean Identities

The foundational Pythagorean identities include:

- $\sin^2\theta + \cos^2\theta = 1$
- $1 + \tan^2\theta = \sec^2\theta$
- $1 + \cot^2\theta = \csc^2\theta$

These identities assist in simplifying expressions and solving equations involving trigonometric functions.

Reciprocal Identities

Reciprocal relationships are often utilized in the answer key to convert between trigonometric functions:

- $\sin\theta = 1 / \csc\theta$
- $\cos\theta = 1 / \sec\theta$
- $\tan\theta = 1 / \cot\theta$

Co-Function Identities

These identities relate trigonometric functions of complementary angles:

- $\sin(90^\circ - \theta) = \cos\theta$
- $\cos(90^\circ - \theta) = \sin\theta$
- $\tan(90^\circ - \theta) = \cot\theta$

Angle Sum and Difference Formulas

For solving more complex problems, the answer key includes formulas such as:

- $\sin(a \pm b) = \sin a \cos b \pm \cos a \sin b$
- $\cos(a \pm b) = \cos a \cos b \mp \sin a \sin b$
- $\tan(a \pm b) = (\tan a \pm \tan b) / (1 \mp \tan a \tan b)$

Graphing and Analyzing Trigonometric Functions

Graph interpretation and transformation are critical components of unit 5, with the answer key providing detailed insights into graph characteristics. Understanding these properties is vital for visualizing function behavior and solving related problems.

Amplitude and Period

The amplitude of sine and cosine functions represents the height from the midline to the peak, while the period indicates the length of one complete cycle. The answer key clarifies how to calculate amplitude from the coefficient and period using the formula $period = 2\pi / |b|$ where b is the coefficient of the variable inside the function.

Phase Shift and Vertical Shift

Phase shift refers to horizontal translation of the graph, determined by the value inside the function argument, while vertical shift moves the graph up or down. The answer key explains how to identify and apply these shifts to accurately sketch functions.

Graphing Tangent Functions

Graphs of tangent functions differ due to vertical asymptotes and periodicity

of π . The answer key highlights key points, asymptotes, and the shape of the tangent curve, assisting students in mastering this distinctive graph.
