Understanding Cubing in Writing

Cubing in writing is an instructional strategy that asks writers to explore a topic by examining it through six distinct lenses, akin to the six faces of a cube. Each face represents a different approach or prompt designed to stimulate critical thinking and encourage a multidimensional analysis. This method goes beyond superficial understanding and promotes a thorough exploration of ideas, which can be particularly useful for developing essays, reports, and creative writing projects. The six perspectives typically used in cubing include describing, comparing, associating, analyzing, applying, and arguing, each prompting the writer to consider unique aspects of the subject matter.

The Six Faces of Cubing

Each face of the cube corresponds to a specific prompt that guides the writer's thinking:
