Historical Origins and Development of ASL and French Sign Language

The historical background of French Sign Language (Langue des Signes Française, or LSF) and American Sign Language (ASL) is foundational to understanding their similarities. LSF has roots dating back to the 18th century in France, where it developed organically within Deaf communities. ASL, on the other hand, emerged in the early 19th century in the United States. Its development was significantly influenced by the introduction of LSF to American Deaf education.

Origins of French Sign Language

French Sign Language originated in the Deaf community of Paris. It evolved

naturally as a means of communication among deaf individuals, combining home signs and village signs used by Deaf people across France. By the 18th century, LSF had become a rich, fully developed language with its own grammar and syntax, supporting a thriving Deaf culture.

Development of American Sign Language

American Sign Language began to form primarily after the establishment of the American School for the Deaf in Hartford, Connecticut, in 1817. The school was co-founded by Thomas Hopkins Gallaudet and Laurent Clerc, a Deaf teacher from France who brought LSF with him. The interaction between LSF and existing indigenous sign systems in the U.S. led to the creation of ASL.

Influence of French Sign Language on ASL

The most direct reason why ASL is similar to French Sign Language lies in the historical influence of LSF on ASL. Laurent Clerc's arrival in America marked the introduction of French Sign Language into American Deaf education, profoundly shaping the emerging ASL.

Laurent Clerc's Role

Laurent Clerc was a Deaf educator from the Institut National des Jeunes Sourds de Paris (National Institute for Deaf-Mutes in Paris). His collaboration with Thomas Hopkins Gallaudet led to the foundation of the first permanent school for the Deaf in the United States. Clerc's use of LSF in teaching American Deaf students was pivotal in transferring aspects of French Sign Language to American learners.

Blending of Sign Systems

At the time, various home sign systems and regional sign languages existed among Deaf Americans. The introduction of LSF combined with these indigenous signs resulted in a hybrid language, which evolved into ASL. This blending explains the significant lexical and grammatical similarities observed today.

Structural and Linguistic Similarities Between

ASL and French Sign Language

Analyzing the linguistic features of ASL and LSF reveals several compelling similarities. These similarities go beyond mere vocabulary and extend into the grammar, syntax, and spatial use of language.

Lexical Similarities

Many signs in ASL closely resemble their counterparts in French Sign Language due to their shared origin. This lexical overlap is one of the most noticeable features for learners familiar with both languages.

Grammatical and Syntactic Features

Both ASL and LSF utilize spatial grammar, facial expressions, and body movements to convey meaning, which is typical of natural sign languages. Their sentence structures share similar patterns, such as topic-comment constructions and the use of non-manual markers to express questions or negation.

Use of Space and Classifiers

Both languages employ spatial referencing, where the signer indicates locations in physical space to represent subjects, objects, and actions. Classifier handshapes are used in both ASL and LSF to represent categories of objects and their movements, demonstrating a shared linguistic strategy.

- Shared lexical items and sign forms
- Similar grammatical structures and syntax
- Utilization of spatial grammar and classifiers
- Non-manual markers for grammatical functions

Educational and Cultural Connections

The educational frameworks and cultural interactions between Deaf communities

in France and the United States contributed greatly to the similarities between ASL and French Sign Language. The dissemination of LSF through formal education played a key role in shaping ASL.

Deaf Education in the 19th Century

The establishment of the American School for the Deaf was a turning point. It introduced French pedagogical methods and sign language to American students, which contrasted with oralist approaches prevalent elsewhere. This educational model fostered the transmission of LSF elements into the emerging ASL.

Cultural Exchanges Among Deaf Communities

Deaf individuals and educators traveling between France and the United States facilitated cultural and linguistic exchange. These interactions helped maintain ties between the two languages and their users, reinforcing similarities over time.

Differences Despite Similarities

While ASL and French Sign Language share many features, it is important to recognize that they are distinct languages. Each has evolved independently for nearly two centuries, influenced by unique sociocultural and linguistic factors.

Evolution of ASL in the American Context

ASL has incorporated signs from indigenous sign systems and adapted to the cultural context of the United States. This evolution has led to differences in vocabulary, idiomatic expressions, and usage.

Regional Variations and Dialects

Both ASL and LSF exhibit regional dialects and variations, which add complexity to their comparison. These variations reflect localized Deaf cultures and community preferences.

Distinct Linguistic Identities

Despite their shared roots, ASL and LSF serve different Deaf communities and have developed unique identities. Mutual intelligibility is limited, underscoring their status as separate languages rather than dialects of the same language.

Frequently Asked Questions

Why is American Sign Language (ASL) similar to French Sign Language (LSF)?

American Sign Language (ASL) is similar to French Sign Language (LSF) because ASL was heavily influenced by LSF during its formation in the early 19th century. Thomas Hopkins Gallaudet, an American educator, studied in France and brought French Sign Language to the United States, which blended with local sign systems to create ASL.

What historical events led to the similarity between ASL and French Sign Language?

The similarity between ASL and French Sign Language stems from the establishment of the American School for the Deaf in 1817 by Thomas Hopkins Gallaudet and Laurent Clerc, a deaf teacher from France. Clerc taught LSF signs to American deaf students, which merged with indigenous signs, leading to ASL's development.

Are ASL and French Sign Language mutually intelligible because of their similarities?

ASL and French Sign Language share many similarities due to their historical connection, but they are not fully mutually intelligible. While they have common roots and some overlapping signs, they have evolved separately for over two centuries, resulting in distinct languages.

How much of ASL vocabulary is derived from French Sign Language?

A significant portion of ASL vocabulary is derived from French Sign Language, with estimates suggesting that about 60-70% of ASL signs have origins in LSF. However, ASL also incorporates signs from regional and indigenous sign systems in the United States.

Does the similarity between ASL and French Sign Language affect deaf education in the US and France?

The similarity between ASL and French Sign Language has historical importance in deaf education, as it shaped teaching methods and curriculum in the US. However, modern deaf education in each country uses their respective sign languages, which have developed unique grammatical structures and vocabularies.
